C â^—-algebras (pronounced "C-star") are an area of research in functional analysis, a branch of mathematics.A C*-algebra is a complex algebra A of continuous linear operators on a complex Hilbert space with two additional properties: . A is a topologically closed set in the norm topology of operators.; A is closed under the operation of taking adjoints of operators.

In mathematics, a Hopf algebra, named after Heinz Hopf, is a structure that is simultaneously an (unital associative) algebra and a (counital coassociative) coalgebra, with these structures' compatibility making it a bialgebra, and that moreover is equipped with an antiautomorphism satisfying a certain property. The representation theory of a Hopf algebra is particularly nice, since the ...

Title: Symmetric Sker n-Derivations in Prime and Semiprime Rings Vol.42(6) (2018) page: 845-852 Author(s): B. Dhara and F. Shujat Abstract: For a ring R with an automorphism Î± an n-additive mapping D:R n â†' R is called a skew n-derivation w.r.t. Î± if it is an Î±-derivation of R for each argument. Namely it is always an Î±-derivation of R for the argument being left once (nâ^'1) arguments ...

Abstract Algebra Theory and Applications

Introduction Probability theory is a formal theory of mathematics like many others, but none of them raised so many questions about its interpretations and applicability in daily life as this theory does.
