Nir Joseph Shaviv (Hebrew: ניר יוסף שאביב, born July 6, 1972) is an Israeli-American physics professor, carrying out research in the fields of astrophysics and climate science. He is a professor at the Racah Institute of Physics of the Hebrew University of Jerusalem, of which he is now its chairman.. He is best known for his solar and cosmic-ray hypothesis of climate change.

Solar neutrinos are produced in the core of the sun through various nuclear fusion reactions, each of which occurs at a particular rate and leads to its own spectrum of neutrinos. Details of these reactions are listed below. The main contribution comes from the proton-proton reaction. The reaction is:

Units are at the heart of science and technology. Most measurements require units to express their result. The International System of Units (SI) provides a widely used coherent framework of units.

Rutgers Physics News The 2018 Clarivate Analytics (formerly Thomson Reuters) list of highly-cited researchers was just released and we are delighted that, once again, two of our colleagues, Sang-Wook Cheong and Saurabh Jha, are included among this group. This distinction places them among the top 1% most cited for their subject field and year of publication, earning them the mark of exceptional ...

Nuclear fusion is the only process reasonably capable of powering the sun, and one product of this fusion is invisible particles called 'neutrinos'. But why don't we observe as many solar neutrinos as theory would

predict?

The 21st-century idea of a ‘smart grid’ starts by placing synchrophasors in lots of places throughout the grid. In the context of power engineering, a synchrophasor measures the amplitude and phase of the voltage and/or current. The phase is measured relative to a well-defined standard, typically GPS.
