Implementing Distributed Systems with Java and CORBA Pdf

The Common Object Request Broker Architecture (or CORBA) is an industry standard developed by the Object Management Group (OMG) to aid in distributed objects programming. It is important to note that CORBA is simply a specification.

Distributed Java Programming with RMI and CORBA

Java object as a parameter of CORBA object operation. 2.4 CORBA Services There were not so many commercially available CORBA services at the time we started to design and build our first CORBA/Java system. Another problem is that implementations of CORBA services are expensive and quite difficult to use. For these reasons we use only two services: Naming and Events.

Netprog 2002 - CORBA Intro 10 Interface Definition Language (IDL) is the language used to describe object interfaces, the same as Java interfaces in RMI. IDL is a declarative language, it only describes object interfaces. IDL is language neutral - there are mappings for many object oriented languages (C++, Smalltalk, Java).

CORBA Object References As in Java RMI, a CORBA distributed object is located using an object reference. Since CORBA is language-independent, a CORBA object reference is an abstract entity mapped to a language-specific object reference by an ORB, in a representation chosen by the developer of the ORB.
